1. INTRODUCTION

Kalakriti is a web-based art and creativity platform developed to showcase handmade artwork and provide customers with a simple way to explore creative collections and request customized artwork. The website combines an artist portfolio, artwork gallery, customization information, customer reviews, an order request form, and contact options in one platform.

The website presents a variety of artwork including canvas paintings, acrylic artwork, sketches, portraits, wall paintings, Antarpat designs, rangoli, phone-cover paintings, watercolour work, stone painting, fridge magnets, customized gifts, and other creative work. Each gallery card provides an artwork image, category, title, medium where applicable, description, price information, and an option to place an order.

Kalakriti also provides a customization section where customers can communicate requirements such as name, colour, size, theme, portrait, quote or text, gift, and design customization. The order form collects customer name, email, mobile number, artwork category, artwork reference, preferred size and colour, quantity, required date, budget, customization details, reference image, and additional message.

The project is being integrated with a backend and MySQL database to make the application data-driven. Node.js and Express.js provide the server-side layer, while MySQL stores artwork, order, and review information. This structure separates the presentation layer from data management and provides a foundation for future administration and order tracking.

The main objective of Kalakriti is to provide a simple, attractive, and practical online platform for presenting artwork and collecting customized art requests while demonstrating the use of web development and database technologies.

2. ABSTRACT

Kalakriti – Art & Creativity is a web application designed for showcasing handmade and customized artwork and managing customer requests through an organized digital platform. The system provides an interactive art gallery, customization information, customer reviews, a structured order form, and direct contact options.

The frontend is developed using HTML, CSS, and JavaScript. HTML structures the content, CSS provides the visual design and responsive layout, and JavaScript handles interactive functionality such as artwork category filtering, image preview, form handling, and communication with the backend.

The database layer uses MySQL. A Node.js and Express.js backend is used to provide REST API endpoints between the website and database. The proposed database contains separate tables for artworks, orders, and reviews. Customer reference images and completed-order images can be stored as files while their paths are recorded in MySQL.

The project demonstrates how a creative portfolio can be extended into a small business-oriented web application. It provides a foundation for future features such as an administrator

3. TECHNOLOGIES USED

Technology	Purpose in Project
HTML5	Structures navigation, sections, artwork cards, forms, buttons, images, reviews, and contact information.
CSS3	Controls layout, typography, spacing, cards, responsive design, buttons, forms, and gallery presentation.
JavaScript	Provides client-side interactivity, artwork filtering, image viewer behaviour, validation, and API communication.
Node.js	Provides the server-side JavaScript runtime for the backend.
Express.js	Creates the backend server and REST API routes.
MySQL	Stores structured artwork, order, review, status, and timestamp data.
mysql2	Connects the Node.js backend to MySQL and executes SQL queries.
dotenv	Loads database configuration from environment variables.
Multer	Handles multipart/form-data and image uploads when enabled.
Git	Tracks project versions and changes.
GitHub	Hosts and manages the project source-code repository.

3.1 Development Environment

Visual Studio Code – development and source-code editing.

Web browser – website testing and preview.

MySQL – database creation and SQL testing.

Node.js / npm – backend execution and package management.

Git / GitHub – version control and repository management.

4. DATABASE

The Kalakriti database is named kalakriti. MySQL is used because the project contains structured records that can be stored using relational tables. The database is designed around artwork information, customer orders, and customer reviews.

4.1 Database Creation

```
CREATE DATABASE kalakriti;  
USE kalakriti;
```

4.2 Artworks Table

The artworks table stores information required to display artwork dynamically in the gallery.

```
mysql> DESCRIBE artworks;
```

Field	Type	Null	Key	Default	Extra
id	int	NO	PRI	NULL	auto_increment
name	varchar(255)	NO		NULL	
category	varchar(100)	YES		NULL	
medium	varchar(100)	YES		NULL	
description	text	YES		NULL	
price	varchar(100)	YES		NULL	
image	varchar(500)	YES		NULL	
created_at	timestamp	YES		CURRENT_TIMESTAMP	DEFAULT_GENERATED

8 rows in set (0.00 sec)

4.3 Orders Table

The orders table stores customer requests submitted through the customized artwork order form.

```
mysql> DESCRIBE orders;
```

Field	Type	Null	Key	Default	Extra
id	int	NO	PRI	NULL	auto_increment
customer_name	varchar(255)	NO		NULL	
email	varchar(255)	NO		NULL	
mobile	varchar(30)	YES		NULL	
category	varchar(100)	YES		NULL	
artwork_name	varchar(255)	YES		NULL	
size	varchar(100)	YES		NULL	
color	varchar(255)	YES		NULL	
quantity	int	YES		NULL	
required_date	date	YES		NULL	
budget	varchar(100)	YES		NULL	
customization_details	text	YES		NULL	
reference_image	varchar(500)	YES		NULL	
message	text	YES		NULL	
status	varchar(50)	YES		Pending	
created_at	timestamp	YES		CURRENT_TIMESTAMP	DEFAULT_GENERATED

16 rows in set (0.04 sec)

4.4 Reviews Table

The reviews table stores customer feedback, rating, and completed-order image information.

```
mysql> DESCRIBE reviews;
```

Field	Type	Null	Key	Default	Extra
id	int	NO	PRI	NULL	auto_increment
customer_name	varchar(255)	NO		NULL	
completed_order_image	varchar(500)	YES		NULL	
message	text	NO		NULL	
rating	int	YES		NULL	
created_at	timestamp	YES		CURRENT_TIMESTAMP	DEFAULT_GENERATED

```
6 rows in set (0.00 sec)
```

4.6 Database Operations

CREATE – create the kalakriti database and tables.

INSERT – save new artwork, order, and review records.

SELECT – retrieve records for the website or administrator.

UPDATE – modify artwork information or order status.

DELETE – remove records when required.

Parameterized queries – reduce the risk of SQL injection.

5. ER DIAGRAM

The proposed Entity Relationship model for Kalakriti contains three primary entities: ARTWORKS, ORDERS, and REVIEWS. ARTWORKS stores the creative collection, ORDERS stores customer requests, and REVIEWS stores customer feedback.

6. BACKEND

The backend layer is designed using Node.js and Express.js. It acts as the communication layer between the frontend and MySQL. The frontend sends HTTP requests to API endpoints, the backend validates input and executes parameterized SQL queries, and JSON responses are returned to the frontend.

6.1 Backend Folder Structure

```
backend/  
├── server.js  
├── db.js  
├── .env  
└── uploads/
```

6.2 MySQL Connection

```
const mysql = require("mysql2/promise");  
require("dotenv").config();  
  
const pool = mysql.createPool({  
  host: process.env.DB_HOST,  
  user: process.env.DB_USER,  
  password: process.env.DB_PASSWORD,  
  database: process.env.DB_NAME  
});
```

6.3 Environment Variables

```
DB_HOST=localhost  
DB_USER=root  
DB_PASSWORD=your_mysql_password  
DB_NAME=kalakriti  
PORT=5000
```

The .env file contains sensitive database configuration and should not be committed to GitHub. A .env.example file with placeholder values should be included in the repository.

6.4 REST API Endpoints

Method	Endpoint	Purpose
GET	/api/artworks	Retrieve artwork records
GET	/api/artworks/:id	Retrieve one artwork
POST	/api/artworks	Add an artwork
PUT	/api/artworks/:id	Update artwork
DELETE	/api/artworks/:id	Delete artwork
POST	/api/orders	Create customer order
GET	/api/orders	Retrieve orders
PUT	/api/orders/:id/status	Update order status
DELETE	/api/orders/:id	Delete order
POST	/api/reviews	Submit review
GET	/api/reviews	Retrieve reviews

6.5 Order Processing Flow

Customer fills the Kalakriti order form.
JavaScript collects the form values.
Frontend sends a POST request to /api/orders.
Express receives and validates the request.
Backend executes a parameterized INSERT query.
MySQL stores the order in the orders table.
Backend returns a success response containing the order ID.
Frontend displays the order result to the customer.

7. FRONTEND

The Kalakriti frontend is implemented using HTML, CSS, and JavaScript. The provided project uses a single main HTML page containing the website sections and links to style.css and script.js. The page also loads Cormorant Garamond and Inter from Google Fonts for the website interface.

7.1 Navigation

The navigation bar provides links to Home, About, Gallery, Custom Art, Reviews, Order, and Contact. A separate Order call-to-action button is also provided.

7.2 Home Section

The Home section introduces Kalakriti with the tagline “Turning Imagination into Art”. It includes an introductory description and buttons to explore artwork or request customized art, together with a portfolio image.

7.3 About Section

The About section describes Kalakriti as a creative art platform focused on handmade and customized artwork, including paintings, sketches, fabric, stone, resin, and wall art.

Art created with heart and imagination

Kalakriti is a creative art platform dedicated to handmade and customized artwork. Every artwork is created with creativity, patience and personal touch. From paintings and sketches to fabric, stone, resin and wall art, Kalakriti creates unique artworks according to the customer's requirements.

7.4 Art Gallery

The Gallery contains category filters for All Art, Canvas, Acrylic, Sketches, Portraits, Wall Painting, Antarpad, Rangoli, Phone Covers, and Other Art. Artwork cards contain images, category tags, titles, medium information where applicable, descriptions, price information, and Order Now buttons.

7.5 Custom Art Section

The Custom Art section allows customers to request personalized work. The available customization options include name, colour, size, theme, portrait, quote/text, gift, and design customization.

7.6 Order Section

The Order section collects customer name, email, mobile number, artwork category, artwork name or reference, preferred size, preferred colour, quantity, required date, budget, customization details, reference image, and additional message. It provides both an online order request button and a WhatsApp option.

A screenshot of the Kalakriti website's Order section. The header is identical to the previous screenshot. The main heading is 'Place your order request'. Below the heading is a form with two columns of input fields. The left column contains: 'Customer Name' (text input with placeholder 'Your name'), 'Mobile Number' (text input with placeholder '+91 98765 43210'), 'Artwork Name / Reference' (text input with placeholder 'Name or reference'), 'Preferred Colour' (text input with placeholder 'Preferred colors'), and 'Required Date' (text input). The right column contains: 'Email' (text input with placeholder 'you@example.com'), 'Select Artwork Category' (dropdown menu with 'Painting' selected), 'Preferred Size' (text input with placeholder 'Example: 12x18 inch'), 'Quantity' (text input with placeholder '1'), and 'Budget' (text input).

7.7 Reviews Section

The Reviews section displays client feedback and includes a form for customer name, completed-order image, review message, and a 3-to-5-star rating.

7.8 Contact Section

The Contact section provides the artist name, Instagram handle, email, WhatsApp number, and location, with buttons for direct communication.

7.9 Why Choose Kalakriti

Handmade Artwork

Customized Designs

Made with Creativity

Made According to Your Requirements

8. PROJECT FEATURES

- Responsive art portfolio website.
- Category-based artwork filtering.
- Artwork image preview / modal viewer.
- Customized artwork ordering workflow.

- Reference image upload field.
- Customer review and rating form.
- Instagram, WhatsApp, and email contact options.
- MySQL database for structured project data.
- Node.js and Express.js backend API.
- Order status management.
- Dynamic artwork and review retrieval.
- Environment-based database configuration.
- Git and GitHub version control.

9. FUTURE SCOPE

The current Kalakriti project can be expanded from a portfolio and order-request website into a complete art-order management platform.

Admin dashboard for managing artworks, orders, reviews, and customers.

Customer registration and secure login.

Order tracking with status updates.
Online payment integration.
Automatic email or WhatsApp notifications.
Cloud image storage for artwork and customer uploads.
Advanced search and filtering by category, medium, size, and price.
Customer wishlist or favourite artwork functionality.
Sales and order analytics.
Cloud deployment of frontend, backend, and database.

10. ACKNOWLEDGEMENT

I would like to express my sincere gratitude to my project guide and faculty members for their guidance, valuable suggestions, and support throughout the development of the Kalakriti project. Their feedback helped me understand the practical aspects of web development, database management, backend development, and project documentation.

I am also thankful to my college and department for providing the learning environment and resources required to develop this project. I would like to thank my friends and classmates for their suggestions and encouragement during the development and testing stages.

Finally, I am grateful to my family for their continuous support, motivation, and encouragement throughout the completion of this project.
